EDUCATION

Purdue University, School of Science, Indianapolis

May 2027

Bachelor of Science, Computer Science, Certificate in AI

GPA- 3.76

Relevant Coursework: The Data Mine Seminar, Corporate Partners, Architecture of Computers, Data Structures, Principles Of Software Design, Linear Algebra, Statistics, Mechanics, Calculus 2

SKILLS

Experienced In: Python, Pandas, Visualization, Tensorflow, PyTorch, Java, C++, SQL, R, JavaScript, React.js, HTML/CSS, XML, ML, Microsoft, Splunk, Power Bi/Automate, Tableau, IT support VM, QuickBooks, Excel, Data Analysis

EXPERIENCE

Software Engineering Intern: [Interlinked](#) – Remote April 2025-September 2025

- Working with full-stack features using **React**, **TailwindCSS**, and **Node.js/Express or FastAPI**; integrating **APIs** and used **AWS** to enhance platform functionality and reliability.
- Collaborating with product/design teams in agile workflows (sprint planning, standups, code reviews) to deliver responsive, high-impact features.

Software Engineering Intern: [Moblize.it](#)- Remote April 2025- August 2025

- Formulating cloud-based applications using **Google Cloud Platform** and various development tools, contributing to production-level software solutions.
- Strengthening skills in cloud computing, CRM systems, and **full-stack** development through guided mentorship and hands-on project work.

Big Data Analyst Intern: [Living Stones Foundation](#)- Remote Jan 2025- Present

- Analyzing migration patterns and donor contributions using **Python**, **SQL**, and **R** to support decision-making.
- Building **predictive models** and **data visualizations** with **Power BI and Tableau** for fundraising optimization and helping to develop an **AWS or SQL Server** infrastructure for scalable storage and analytics.

Data Scientist Researcher: Rolls-Royce- [Indianapolis, IN; Aug 2025-Present](#)

- Conducting analysis of large engine electronics testing datasets by developing **machine learning** and **visualization** tools in **Python** to evaluate controller performance and detect anomalies, via Purdue Data Mine program.
- Applying **signal processing** on voltage/frequency sensor data to uncover trends and potential causes impacting product safety.

Data Engineering Researcher: Elevance Health (Anthem Inc)– [Indianapolis, IN; Aug 2024-May 2025](#)

- Developed [Abnormalities Outliers Project](#) Via Purdue Data Mine Program that uses **cybersecurity defenses** to detect and recognize potential threats and breaches. Gained proficiency in the **MITRE ATT&CK** framework.
- Conducted data analysis with **Python Pandas** on log files to identify potential anomalies, leveraging a **remote virtual machine (VM)** connection environment within **Splunk (SPL)**.
